Suspension system and product holder for products

5 A suspension system for products comprises a base (1) for fixing to a wall of a space, provided with at least one product holder (10). On a first side the product holder is connected displaceably to the base (1) and on a second side comprises a suspension member (14,15) which is able to receive a product. The base comprises at least two
10 mutually telescopic profiles (2,3), wherein on the first side the product holder is connected to at least one of the profiles not only displaceably but also for rotation on a longitudinal axis (L).
